Expression of IIIR, in cells and tissues can be modulated be compositions comprising oligomers which are able to specifically hybridise with target areas of its encoding sequence. The composition cape used for treatment of disease in humans caused by excessive receptor expression, e.g. inflammation. When labelled they can be used diagnostically to determine overexpression of IIIR, also to determine localisation and distribution of this expression for research, diagnostic
                                                    AAZ37473-Z37738 represent human mdm2 phosphorothioate oligonucleotides. AAZ37471, AAZ37472, AAZ37739, AAZ37740 and AAZ37741 are used in the exemplification of the present invention. The present invention describes novel nucleotide antisense compounds, targetted to the 5' untranslated, translation termination codon, or 3' untranslated region of a nucleic acid encoding human mdm2, that modulates expression of human mdm2. The oligonucleotides mediate their effect by antisense inhibition of hyperproliferative gene expression. The antisense compound is used to treat an animal having a disease or condition associated with mdm2, particularly a hyperproliferative condition, more particularly cancer, especially of the blood, brain, breast, lung or soft tissue, or psoriasis, fibrosis, atherosclerosis or restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Synthetic

                                                                                                                                                                                                                                                     AAZ37473-Z37738 represent human mdm2 phosphorothioate oligonucleotides. AAZ37471, AAZ37472, AAZ37739, AAZ37740 and AAZ37741 are used in the exemplification of the present invention. The present invention describes novel nucleotide antisense compounds, targetted to the 5' untranslated, translation termination codon, or 3' untranslated region of a nucleic acid encoding human mdm2, that modulates expression of human mdm2. The oligonucleotides mediate their effect by antisense inhibition of hyperproliferative gene expression. The antisense compound is used to treat an animal having a disease or condition associated with mdm2, particularly a hyperproliferative condition, more particularly cancer, especially of the blood, brain, breast, lung or soft tissue, or

                                                                                                                                                                                                                                                                                                                                                                                                                                                           hyperproliferative gene expression. The antisense compound is used to treat an animal having a disease or condition associated with mdm2, particularly a hyperproliferative condition, more particularly cancer, especially of the blood, brain, breast, lung or soft tissue, or psoriasis, fibrosis, atherosclerosis or restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAZ37473-Z37738 represent human mdm2 phosphorothioate oligonucleotides. AAZ37471, AAZ37472, AAZ37739, AAZ37740 and AAZ37741 are used in the exemplification of the present invention. The present invention describes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human mdm2 gene; proliferation; tumour; phosphorochioate; p53; cancer; antisense; modulation; oligonucleotide; expression; inhibition; hyperproliferation; blood cancer; brain cancer; breast cancer; ancer; sense cancer; brain cancer; streast cancer; brain cancer; streast cancer; brain cancer; soft tissue cancer; psoriasis; fibrosis; atherosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human mdm2 phosphorothioate oligodeoxynucleotide #265.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           07-JAN-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ37735 standard; DNA; 20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              hyperproliferative gene expression. The antisense compound is used to treat an animal having a disease or condition associated with mdm2, particularly a hyperproliferative condition, more particularly cancer, especially of the blood, brain, breast, lung or soft tissue, or psoriasis, fibrosis, atherosclerosis or restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAZ37473-Z37738 represent human mdm2 phosphorothioate oligonucleotides. AAZ37471, AAZ37472, AAZ37739, AAZ37740 and AAZ37741 are used in the exemplification of the present invention. The present invention describes novel nucleotide antisense compounds, targetted to the 5' untranslated, translation termination codon, or 3' untranslated region of a nucleot acid encoding human mdm2, that modulates expression of human mdm2. The oligonucleotides mediate their effect by antisense inhibition of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This primer can be used in the specific PCR amplification of the human CC hairless intron 15. This PCR allowed the sequencing of intron 15 and CC comparision of the nucleotide sequence. A mutation was found within this cintron that after further analysis was associated with the alopecia CC universalis phenotype in this family. The gene was discovered by CC genotyping a Pakistani kindred (comprising of 4 affected males and 7 CC inheritance. The invention provides methods and sequences for the CC recombinant production of wild-type human hairless, mutant human hairless and wild-type human whn (winged-helix-nude) proteins, assays for CC and wild-type human whn (winged-helix-nude) proteins, assays for CC screening for binding compounds, modulators and homologues, and animal CC alopecia (male pattern baldness), alopecia areata, alopecia totalis, CC congenital alopecia universalis, congenital alopecia and severe T-cell immunodeficiency can be treated with compounds identified in the assays. The methods are also useful for identifying compounds that can be used to inhight hair process.

```
New DNA encoding human phosphomannomutase or its fragments - used to detect mutations associated with carbohydrate-deficient glycoprotein syndrome-1, particularly for prenatal diagnosis.
```

Claim 5; Page 64; 104pp; English

express PMM2 or its mutants; and to create transgenic animals for use in drug screening and for studying expression pathways. The expressed proteins are used to screen for agents that modulate activity of PMM2, proteins are used to screen for agents that modulate activity of PMM2, for therapy and to raise specific antibodies (for detecting PMM2 or its mutants, in competitive or capture assays). Biochemical assays for phophomannomutase activity are used to identify possible carriers of CDG1 (Jacken disease). Measuring enzymatic activity in foetal cells (or in parental leucocytes if such cells are unavailable) and detecting mutations in the PMM2 gene makes possible a better prenatal diagnosis of CDG1. Sequences AAV80026-43 represent primers used in PCR and singlestrand confirmation polymorphism (SSCP) analysis of the 8 exons of PMM2 gene. These primers are used to determine the SSCP mutations in the PMM2 are sequences invention relates to a human phosphomannomutase-2 (PMM2) protein and nucleoride sequence encoding the protein. The DNA or its fragments used to detect mutation in the PMM2 genes that are associated with carbohydrate-deficient glycoprotein syndrome type 1 (CDG1). The usences can also be used to detect expression of PMM2-related cDNA; to ii 6

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a human phosphomannomutase-2 (PMM2) protein and the nucleotide sequence encoding the protein. The DNA or its fragments are used to detect mutation in the PMM2 genes that are associated with the carbohydrate-deficient glycoprotein syndrome type 1 (CDG1). The sequences can also be used to detect expression of PMM2-related cDNA; to express PMM2 or its mutants; and to create transgenic animals for use in drug screening and for studying expression pathways. The expressed proteins are used to screen for agents that modulate activity of PMM2, for therapy and to raise specific antibodies (for detecting PMM2 or its mutants, in competitive or capture assays). Biochemical assays for phophomannomutase activity are used to identify possible carriers of CDG1 (Jaeken disease). Measuring enzymatic activity in foetal cells (or in parental leucocytes if such cells are unavailable) and detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDG1. The present sequence represents an exonic primer used for the single-strand confirmation polymorphism (SSCP) analysis of PMM2 exon

The invention identifies a genetic locus ASTH1, associated with asthma, mapped to human chromosome 11p. ASTH11 and ASTH1J are genes present within the locus, located close to each other on human chromosome 11p, and have similar patterns of expression, and common sequence motifs. The ASTH1 genes and fragments, encoded protein, genomic regulatory regions and anti-ASTH1 antibodies are useful in the identification of individuals

predisposed to development of asthma,

and for

modulation of

                                                                                                                                         This invention describes a novel method for determining the danger of suffering from Alzheimer's disease (AD) in which if the 19117th to the 19183rd bases in the gene of a dihydrolipoamidosuccinyl transferase of a mitochondria alpha-ketoglutarate dehydrogenase complex are respectively A and C in the above order in both genes derived from its father and mother is checked. The method is useful for the prevention of Alzheimer's disease. AAZ435/4-Z43603 represent primers used in the detection method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   activity in vivo for prophylactic and therapeutic purposes. The ASTI protein is useful as an immunogen to raise specific antibodies, in screening for compositions that mimic or modulate ASTH1 activity or expression, including altered forms of ASTH1 protein, and as a therapeutic. Sequences AAZ18510-Z18631 represent PCR primers for polymorphic microsatellite markers in the ASTH1 region
                                                                                                                                                                                                                                                                              Determination of danger
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 20 BP; 6 A; 3 C; 9 G; 2 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                       CC microsatellite repeat (PMR) sequences from the human costimulatory creeptor gene locus (hCGRL). The primers are used in the method of the cinvention. The specification describes a method for determining the creeptor gene locus (hCGRL). The primers are used in the method of the comprises detecting a pMR sequence in the CD28, ICOS gene or CTLA4 (C gene of the human costimulatory receptor gene locus (hCGRL). PMR CC generate products that differ in size. These products can then be compared by rapid and convenient high resolution processes. The method is useful for determining the predisposition of insulin-dependent diabetes mellitus (IDDM), Addison's disease, Graves disease, autoimmune chipothyroidism, myasthenia gravis, thymoma, lugus, thyroiditis, coeliac disease and leprosy. PMR sequences within hCRGL are useful as coeliac disease and leprosy. PMR sequences within hCRGL are useful as coeliac disease and leprosy. PMR sequences within hCRGL are useful as coeliac disease and leprosy. PMR sequences within hCRGL are useful as coeliac disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes a novel method for detecting the presence in a subject of a polymorphism linked to a gene associated with familial dysauconomia comprising analyzing human chromosome 9. The method comprises analyzing human chromosome 9 for the presence of a polymorphism located between D9S3 and D9S105 inclusive and linked to the gene associated with familial dysautonomia where the presence of a polymorphism is indicative of carriers of a gene associated with familial dysautonomia. The methods allow characterization of simple sequence repeat polymorphisms using less DNA, typically 10 nanograms of genomic DNA, and is faster than restriction fragment length polymorphism analysis. AAZ43609-Z43642 represent PCR primers used in the detection method described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detection; polymorphism; familial dysautonomia; human; chromosome p9S53; D9S105; PCR primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Breakefield

The specification describes a method for the prognosis of a known predisposition to hypertension, which is associated with the angittensinogen gene in humans and is caused by the presence of a mutation at -20 from C to A (A-20C mutation). Mutation at this position reduces affinity for the following transcription factors: upstream stability factor and oestrogen receptor. The presence of this mutation,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 in a subject predisposed to hypertension, indicates increased predisposition, or predisposition to more severe disease. The method is allows affected subjects to be monitored closely, and treated, before the second second subjects to be monitored closely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29-JUN-1998;
                                                  New antisense compounds that hybridizes with and inhibits the of human telomeric repeat binding factor 1 (TRBF-1), useful for conditions or diseases associated with TRBF-1 expression.
                                                                                                                                                                                                                                                                                                                                               Human telomeric repeat binding factor 1; hTRBF-1; antisense; disease; modulation; expression; prophylaxis; infection; inflammation;

The antisense compounds are used for treating a patient suspected of having or being prone to a disease or condition associated with expression of TRBF-1 by modulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      its expression. They may also be used prophylactically to prevent or delay infection, inflammation or tumour formation, or as research reagents and diagnostics, e.g. to distinguish between functions of various members of a biological pathway. The antisense oligonucleotides disclosed are described in GENESEQ records AAA54242-A54280, AAA54385
                      This sequence represents hGH-A1819 PCR primer #1, used with primer #2 (AAZ38450) to amplify a portion of the human growth hormone (hGH) gene for linkage analysis with the angiotensin-converting enzyme (ACE) gene. Genetic studies revealed that the genes encoding two key enzymes in the angiotensin II synthetic pathway, renin and ACE, were not associated with human hypertension; however, the angiotensinogen (ACT) gene was involved in the pathogenesis of essential hypertension. Sequence variations in the ACT gene can be identified via amplification of gene fragments via PCR, using primers AAZ3841-Z38448, and subsequent sequence analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        30-SEP-1992;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gene can be used to identify individuals with a genetic predisposition develop essential hypertension or pregnancy-induced hypertension. Detection of a predisposition would then allow specific management of hypertension in these subjects e.g., by dietary sodium restriction, by monitoring blood pressure and treating with conventional drugs, by administration of renin inhibitors or by administration of drugs to inhibit synthesis of AGT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       susceptibility to
gene can be used t
develop essential
antiinfectious activity. Synthesized chimeric oligonucleotides targeted to human MDMX, 20 nucleotides in length, composed of a central gap region consisting of ten 2'-deoxynucleotides flanked on both sides by 5-nucleotide wings were tested for antisense inhibition of MDMX expression. Results of real-time quantitative polymerase chain reaction (PCR) showed 71 out of the 159, 20 base pair sequences, all fully defined in the specification, demonstrated at least 30% inhibition of MDMX expression. The antisense oligonucleotides are useful for effective and specific modulation, particularly inhibition of MDMX expression, and may be used in treating humans or animals suspected of having or being prone to a disease or condition associated with expression of MDMX. The antisense oligonucleotides may also be used as research reagents or kits, and as disgnostices, e.g. to elucidate the function of a particular gene or to distinguish between functions of various members of a biological pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 20 BP; 4 A; 8 C; 5 G;
                                                                                                                                                                                                                                                in length, targeted to a nucleic acid encoding a human MDMX. (I) specifically hybridizes with and inhibits the expression of human MDMX. The products of the invention have anticarcinogen, antiinflammatory and
                                                                                                                                                                                                                                                                                                                                                                           New antisense oligonucleotides targeting nucleic acids encoding human MDMX useful for inhibiting MDMX expression and for treating diseases associated with MDMX expression e.g. tumor formation, inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09-APR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             á
                                              CC in length, targeted to a nucleic acid encoding a human MDMX. (I) specifically hybridizes with and inhibits the expression of human MDMX. (C) specifically hybridizes with and inhibits the expression of human MDMX. (C) The products of the invention have anticarcinogen, antiinflammatory and contininfectious activity. Synthesized chimeric oligonucleotides targeted to human MDMX, 20 nucleotides in length, composed of a central gap region consisting of ten 2'-deoxynucleotides flanked on both sides by 5-consisting of ten 2'-deoxynucleotides flanked on both sides by 5-consisting of ten 2'-deoxynucleotides flanked on both sides by 5-consisting of ten 2'-deoxynucleotides flanked on both sides by 5-consisting of ten 2'-deoxynucleotides in hibition of MDMX expression. CC results of real-time quantitative polymerase chain reaction (PCR) showed close of the sides of the sides of the sides of the constrated at least 30% inhibition of MDMX expression. The antitions of month and may be used as prophylation of month and specific conditation, particularly inhibition of MDMX expression, and may be used as collagonousleotides may also be used as research reagents or kits, and as diagnostics, e.g. to elucidate the function of a particular gene or to condition of the mathod of the invention of antisense oligonucleotides may also be used as research reagents or kits, and as collagonation. AAA11781-A11945 represent antisense oligonucleotides flanked of the invention of the particular specifical pathway.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              and as prophylaxis, e.g. to prevent or delay infection, inflammation tumor formation. AAA11781-AA1945 represent antisense oligonucleotides described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense oligonucleotides targeting nucleic acids encoding MDMX useful for inhibiting MDMX expression and for treating disa associated with MDMX expression e.g. tumor formation, inflammati
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ş
The invention relates to the ASTH1 locus on the short arm of human CC chromosome (11p). This locus comprises the ASTH1I and ASTH1I genes, which CC are associated with a genetic predisposition to asthma and bronchial CC hyperreactivity. The ASTH1I and ASTH1J genes are oriented in opposite CC directions with the ASTH1 locus, and have similar patterns of expression CC and common sequence motifs. They are both expressed in trachea, lung and Several other tissues. ASTH1I and ASTH1J are novel members of the ets CC family of transcription factors, which have been implicated in the CC genes known to be important in the actiology of asthma. Both ASTH1I and ASTH1J mRNAs are alternatively spliced. Alternative splicing of CC transcripts has no effect on the open reading frame of ASTH1I, as the CC exons involved are all 5' to the start codon in exon b. In contrast, CC alternative splicing of ASTH1I transcripts results in 3 different ASTH1I concluded are all 5' to the start codon in exon b. In contrast, colorisms. The invention also encompasses mouse asth1j protein. The ASTH1I CC predisposition to asthma, as probes for identify a hereditary a hereditary protein in cell lines. The encoded ASTH1 proteins are useful as communogens to raise specific antibodies; in drug screening for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The ASTHI genes or fragments thereof, encoded proteins, ASTHI genomic regulatory regions, and anti-ASTHII and anti-ASTHII antibodies are useful in the identification of individuals predisposed to development of asthma, and for modulation of gene activity in vivo for prophylactic and therapeutic purposes. The intact ASTHII or ASTHII proteins or active fragments thereof may be used to modulate or reduce bronchial hyperreactivity. Sequences AAA80417-A80538 represent sequences flanking polymorphic microsatellite markers in the ASTHI region, which were also used as PCR primers for amplification of the markers for hatched as analysis of contracts of the markers for hatched as analysis of contracts of the markers for hatched as analysis of contracts of the markers for hatched as analysis of contracts of the markers for hatched as analysis of contracts of the markers for hatched as a contract of the markers for hatched as contracts of the markers for markers for any contracts of the markers for the markers for markers for the 
                                                               cell comprises a recombinant expression construct encoding a mammalian p21 gene which gives rise to the expression of p21 in the cell. The p21 gene is under the control of a promoter. The recombinant cell is used in methods for identifying genes involved in cell cycle progression, growth promotion, modulation of apoptosis, cellular senescence and aging and for identifying compounds that inhibit or potentiate cellular senescence, regulated by p21. The fibrosarcoma cell can be used to produce or an antiapoptotic or mitogenic factor. The present sequence represents a PCR primer used to amplify a human promoter DNA sequence for use in the
                                                                                                                                                                                                                                                                                                                                                                                                                                            Recombinant mammalian fibrosarcoma cell for identifying compounds that inhibit or potentiate cellular senescence, regulated by p21, comprises
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAC61094 standard; DNA; 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         batched analysis of genotypes (BAGs)

                                                                                                                                                                                              The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a primer used to amplify a human cDNA are closed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            08-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a primer used to amplify a human cDNA clone provided in the invention
                                                                         Human; SPINK5; lympho-epithelial Kazal-type related inhibitor; LEKTI; se; serine protease inhibitor; atopic disease; Netherton's syndrome; asthma; eczema; hayfever; antiasthmatic; antiallergic; antiinflammatory; dermatological; PCR primer; sequencing primer; gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       07-JUL-2000; 2000EP-00114089

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             fragments of a SPINKS clone, sequencing primers and PCR primers for SPINKS. SPINKS encodes lympho-epithelial Kazal-type related inhibitor (LEKTI), a serine protease inhibitor. Susceptibility or predisposition to an atopic disease in a human subject can be detected by screening the genome for one or more polymorphic variants of SPINKS gene and/or expression of a variant LEKTI protein in a tissue. Carrier status of a subject or development of Netherton's syndrome is diagnosed by screening for the presence of loss-of-function mutations in the SPINKS gene. An expression vector comprising a nucleic acid encoding a serine protease inhibitor or its functional fragment can be used in screening for compounds with potential pharmacological activity by determining the serine protease activity of a protein previously identified as a ligand of the LEKTI protein. The atopic diseases include Netherton's Syndrome, asthma erzema and hauferner.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence

disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for treating a patient diagnosed as having a lower than normal high density lipoprotein-cholesterol (HDL-C) level, a higher than normal triglyceride level, or a cardiovascular disease, involving administering a compound that modulates LXR- or RXR-mediated transcriptional activity or ABC1 expression or activity. The LXR gene product may be used in an assay to identify compounds useful for the treatment of a disease or condition selected a lower than normal HDL cholesterol level, a higher than normal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Antisense oligonucleotide; groB; groEL; groES; inhibitor; growth; microorganism; Escherichia coli; Streptococcus pneumoniae; diagnosis; Streptococcus pyogenes; Staphylococcus aureus; Pseudomonas aeruginosa; antibacterial; antiviral; antiproliferative; antisense therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S. aureus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          therapeutics, prophylaxis and as research reagents and kits, e.g., to prevent or delay microbial infections in humans. They are also useful as molecular weight markers. AAH56362 to AAH56367 and AAH56833 to AAH56854 represent PCR primers for groß sequences which are used in the exemplification of the present invention. AAH56855 to AAH56870 represent groß nucleotide sequence given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           expression of GL or GS, is claimed. (I) have antibacterial, antiviral and antiproliferative activities, and can be used in antisense therapy and for inhibiting expression of GL or GS in cells or tissues in vitro. (I) are also useful for inhibiting the growth of a microorganism, or inhibiting the expression of GL or GS gene in a microorganism (a bacterial cell or a virus) having a GL or GS gene which involves administering to the microorganism or to a cell infected with the microorganism, (I). (I) are also useful for treating a mammalian pathological condition mediated by the microorganisms having a pathological condition mediated by microorganisms having a GL or GS gene and administering (I) such that the growth of microorganism is inhibited. The antisense compounds are utilized for diagnostics,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       microorganism, where the antisense compound is complementary to GL or GS of a microorganism and specifically hybridises with and inhibits the expression of GL or GS, is claimed. (I) have antibacterial, antiviral and

밁

Novel antisense compounds targeting nucleic acid encoding groEL or gene of microorganism, which hybridize with and inhibit expression genes, useful to inhibit growth of microorganism having the genes.

of the

Novel antisense compound 8-30 nucleobases acid molecule encoding human mdm-2 useful

The present invention specifically claims AAH56368 to AAH56832 which

are

in length targeted

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc microorganism, where the antisense compound is complementary to GL or GS of a microorganism and specifically hybridises with and inhibits the CC expression of GL or GS, is claimed. (I) have antibacterial, antiviral and CC antiproliferative activities, and can be used in antisense therapy and CC inhibition of expression of GL or GS in cells or tissues in vitro. (I) are CC inhibiting expression of GL or GS in cells or tissues in vitro. (I) are CC also useful for inhibiting the growth of a microorganism, or inhibiting CC the expression of GL or GS gene in a microorganism, or inhibiting CC the expression of GL or GS gene which involves administerial cell or a CC virus) having a GL or GS gene which involves administering to the CC microorganisms or to a cell infected with the microorganism, (I). (I) are CC also useful for treating a mammalian pathological condition mediated by the microorganisms which involves identifying a eukaryotic organism CC daving a pathological condition mediated by microorganisms having a GL or CC gene and administering (I) such that the growth of microorganism is CC inhibited. The antisense compounds are utilised for diagnostics, to prevent or delay microbial infections in humans. They are also useful as CC molecular weight markers. AAH5632 to AAH56357 and AAH56831 to AAH56854 CC exemplification of the present invention. AAH56855 to AAH56870 represent CC groß mucleotide sequence given in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 1314

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1776-1806 of the translation termination codon region or 1818-2370 of the 3 untranslated region of a nucleic acid molecule encoding human mdm-2. The invention is useful for reducing hyperproliferation of human cells, modulating the expression of mdm2 in human cells or tissues or in vitro. The hyperproliferative disorder includes cancer or psoriasis
                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to an antisense compound 8-30 nucleobases in length cargeted to nucleobases 1-308 of the 5' untranslated region, 1776-1806 of the translation termination codon region or 1818-2370 of the 3' untranslated region of a nucleic acid molecule encoding human mdm-2. The invention is useful for reducing hyperproliferation of human cells, modulating the expression of mdm2 in human cells or tissues or in vitro. The hyperproliferative disorder includes cancer or psoriasis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel antisense compound 8-30 nucleobases in length targeted to a nucleobased molecule encoding human mdm-2 useful for modulating the expression of human mdm-2 and reducing hyperproliferation of human cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human mdm2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to an antisense compound 8-30 nucleobases in length targeted to nucleobases 1-308 of the 5' untranslated region, 1776-1806 of the translation termination codon region or 1818-2370 of the 3' untranslated region of a nucleic acid molecule encoding human mdm-2. The invention is useful for reducing hyperproliferation of human cells, modulating the expression of mdm2 in human cells or tissues or in vitro.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding human mdm-2 useful for modulating the expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human mdm2 phosphorothicate oligonucleotide

The invention is useful for reducing hyperproliferation of human cells, modulating the expression of mdm2 in human cells or tissues or in vitro. The hyperproliferative disorder includes cannot be represented by the superproliferative disorder includes cannot be required to the superproliferative disorder to the superproliferative disorder to the superproliferative disorder to the superproliferative disorder to the super
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antisense compound 8-30 nucleobases in length targeted to a nucleic acid molecule encoding human mdm-2 useful for modulating the expression of human mdm-2 and reducing hyperproliferation of human cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Miraglia

                                                  markers in 26 FD families. A kit to detect the presence of polymorphisms linked to a gene associated with FD, the Riley-Day syndrome (an autosomal recessive disorder characterised by developmental loss of neurons from sensory and autonomic nervous system) in an individual, comprises a nucleic acid primer of at least 15 contiguous nucleotides and at least one other reagent. The kits are useful for diagnosing familial dysautonomia and the test can be used prenatally to screen a foetus, or presymptomatically to screen a subject at risk in affected FD families
Sequence 20
                                                                                                                                                                                                                                                                                                The FD gene has been mapped to chromosome 9q31-q33 by linkage with 10 DNA

acid New genotyping oligonucleotide, absence or identity of single po e, useful for detecting the polynucleotide polymorphism m in a nuc

Claim 1; Page 51; 83pp; English.

primer extension (SNPB) primers, and the sequences of regions flanking sites of single nucleotide polymorphisms SNPs. The present invention includes kits for determining the presence or absence of a SNP, using the oligonucleotides of the invention. The PCR primers are used to amplify a SNP flanking sequence, the SNPE primer is used as genotyping primer. The oligonucleotides are useful for genotyping a nucleic acid sample by performing a single-nucleotide primer extension reaction. The oligonucleotides are useful for determining the presence, absence or identity of a SNP and for genotyping nucleic acid samples, for e.g. to assess by association analysis the genotype of an individual or group of individuals, having a pathological phenotypic trait suspected of being caused by one or more SNPs. Phenotypic traits include diseases e.g. Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide

of polymorphisms associated with

Phenotypic traits also include symptoms of or susceptibility to multifactorial disease of which a component is or may be genetic such as autoimmune diseases, including, rheumatoid arthritis, multiple sclerosis, inflammation, cancer, nervous system diseases and infection by pathogenic microorganism. The method is also useful in forensic investigations and paternity analysis. The present sequence represents a PCR primer specific
comprising a recombinant expression construct encoding a mammalian p21 on p16 gene. The p21 and p16 proteins are cyclin dependent kinase (CDK) inhibitors cause cell cycle arrest in a variety of physiological situations, p21 and p16 are intimately associated with the process of sensence in mammalian cells. The invention also encompasses cells additionally containing a construct comprising a reporter gene under the control of a promoter from a mammalian gene whose expression is induced or inhibited by a CDK inhibitor such as p21 or p16. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO200138532-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAH24276 standard; DNA; 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 20 BP; 7 A; 7 C; 3 G; 3 T; 0 U; 0 Other;

Such genes (which include connective tissue growth factor, serum amyloid A, integrin beta-3, activin A, natural killer cell protein 4, Mac2 binding protein and tissue transglutaminase) can be used as markers of cellular senescence. Recombinant cells of the invention are used to identify compounds which inhibit, promote or potentiate senescence, or which modulate the effects of CDK inhibitor-mediated induction or repression of gene expression. Compounds identified using methods of the invention may be used in the treatment of cellular proliferative disorders such as cancers, or age-related diseases such as Alzheiner's disease, amyloidosis, atheroselerosis, and arthritis. Sequences AAH24276- AAH24277 represent PCR primers used in an exemplification of the invention to amplify the p21-repressible human pLKI promoter for construction of a p21-responsive reporter construct
                                                             The present invention describes a method for determining the presence or susceptibility to Alzheimer's disease in humans, involving detecting genetic lesion in the presentiner—1 (PSENI) gene, found on chromosome The genetic lesion is a polymorphism in the promoter or upstream regulatory region of the gene. The invention also describes transgenic animals which can be used to identify compounds useful in treating
                                                                                                                                                                                                                                        Determining wether a human subject has or is at -onset) Alzheimer's disease comprises detecting genetic lesion in the presention-1 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                    ঠ
         antisense oligonucleotides are used in the treatment of an animal suffering from a disease or condition associated with Survivin, e.g. a CC hyperproliferative condition such as cancer, and comprises administering CC a therapeutically or prophylactically effective amount of the antisense CC oligonucleotide so that expression of Survivin is inhibited. The CC oligonucleotide so a laso be used to treat a human suffering from a CC disease or condition characterised by a reduction in apoptosis comprising CC administering the antisense oligonucleotide to a human. In addition, the antisense oligonucleotide to a human. In addition, the care and a cytotoxic chemotherapeutic agent e.g. taxol or cisplatin, can be used to modulate apoptosis, cytokinesis or the CC cell cycle, or inhibit the proliferation in a cancer cell by contacting the cell with the antisense oligonucleotide. AAS21521-AAS21768 represent Survivin nucleic acids, and antisense oligonucleotides targeted to Survivin, used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                      Ś
                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to antisense compounds, 8-30 nucleobases in CC length targeted to the 5' untranslated region, translation termination CC codon region, 3' untranslated region, coding region or translation start CC site of a nucleic acid encoding human mdm2, where the antisense compound modulates the expression of human mdm2. The antisense oligonucleotides of CC the invention are useful for encoding human mdm2 and for inhibiting the CC expression of human mdm2. They may be used for treating an animal having CC a disease or condition associated with amplification of mdm2 gene or overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis, CC fibrosis, atheroselerosis or restenosis, tumours, colorectal carcinoma CC and chronic myelogenous leukemia. The antisense compound may be CC administered with a chemotherapeutic agent to overcome drug resistance. CC The antisense compound reduces hyperproliferation of human cells. The method, which involves the use of the antisense compound, is also useful CC for detecting the role of mdm2 expression in various cell functions and CC diagnostic tools. AAS29242-AAS29507 represent the human mdm2 antisense CC oligonucleotides of the present invention
                                                                                                                                                                                     RESULT 1325
                                                                                                                                                                                                                                                                                                         Matches 18;

The present invention relates to antisense compounds, 8-30 nucleobases in clearly thargeted to the 5' untranslated region, translation termination codon region, 3' untranslated region, coding region or translation start site of a nucleic acid encoding human mdm2, where the antisense compound modulates the expression of human mdm2. The antisense oligonucleotides of the invention are useful for encoding human mdm2 and for inhibiting the expression of human mdm2. They may be used for treating an animal having a disease or condition associated with amplification of mdm2 gene or overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis, fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma and chronic myelogenous leukemia. The antisense compound may be administered with a chemotherapeutic agent to overcome drug registance. The antisense compound reduces hyperproliferation of human cells. The method, which involves the use of the antisense compound, is also useful physiological processes and useful in both clinical research and antisense coll functions and diagnostic tools. AAS2944-AAS29507 represent the human mdm2 antisense

The present invention relates to antisense compounds, 8-30 nucleobases in CC length targeted to the 5' untranslated region, translation termination CC codon region, 3' untranslated region, coding region or translation start CC site of a nucleic acid encoding human mdm2, where the antisense compound CC modulates the expression of human mdm2. The antisense oligonuclectides of CC the invention are useful for encoding human mdm2 and for inhibiting the CC expression of human mdm2. They may be used for treating an animal having CC disease or condition associated with amplification of mdm2 gene or CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis, CC fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma CC and chronic myelogenous leukemia. The antisense compound may be CC administered with a chemotherapeutic agent to overcome drug resistance. The antisense compound reduces hyperproliferation of human cells. The CC method, which involves the use of the antisense compound, is also useful CC for detecting the role of mdm2 expression in various cell functions and CC diagnostic tools. AAS29242-AAS29507 represent the human mdm2 antisense CC cligonucleotides of the present invention

The present invention relates to antisense compounds, 8-30 nucleobases in CC length targeted to the 5' untranslated region, translation termination CC codon region, 3' untranslated region, coding region or translation start CC site of a nucleic acid encoding human mdm2, where the antisense compound CC modulates the expression of human mdm2. The antisense oligonucleotides of CC the invention are useful for encoding human mdm2 and for inhibiting the CC expression of human mdm2. They may be used for treating an animal having CC adisease or condition associated with amplification of mdm2 gene or CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis, cC fibrosis, atheroselerosis or restenosis, tumours, colorectal carcinoma CC and chronic myelogenous leukemia. The antisense compound may be administered with a chemotherapeutic agent to overcome drug resistance. CC The antisense compound reduces hyperproliferation of human cells. The CC method, which involves the use of the antisense compound, is also useful CC for detecting the role of mdm2 expression in various cell functions and CC diagnostic tools. AAS29242-AAS29507 represent the human mdm2 antisense CC oligonucleotides of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; mdm2; hyperproliferative disorder; cancer; psoriasis; atherosclerosis; tumour; cytostatic; anti psoriatic; anti arteriosclerotic; vasotropic; antisense; phosphorothioate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human mdm2 antisense oligonucleotide 31629.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            21-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAS29501;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAS29501 standard;
                                                                                                                                                                                                                                                                                                                                                                                 An antisense compound, useful for treating e.g. nucleobases targeted a region (e.g. translation of a nucleic acid encoding human mdm2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      US2001016575-A1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 modified_base

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ś
                                                                                                                                                                                                                                  The invention relates to isolated genes (Gene 216) from human chromosome CC 20p13-p12 and the proteins they encode. The nucleic acids and proteins CC may be used in the prevention, diagnosis and treatment of diseases CC associated with inappropriate Gene 216 expression. For example, the conclusic acids (or vectors) and protein may be used to treat disorders CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of gene 216 by expressing CC inactive proteins or to supplement the patients own production of Gene C16 proteins. Additionally, the nucleic acids may be used to produce the secreted Gene 216 protein, by inserting the nucleic acids into a host C complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids and CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acid complements of Gene 216 ence 116 protein may also be used as antigens in CC the production of antibodies against Gene 216 and in assays to identify CC modulators of Gene 216 expression and activity. The anti-Gene 216 antibodies and antigens that may be in samples (e.g. apents for detecting the presence of Gene 216 proteins in samples (e.g. by enzyme linked immunosorbant assay or ELISA). Disorders that may be consented. diagnosetic and antigens be the activity of gene 210 and in absorbant may be consented.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Isolated genes (Gene 216) from human chromosome 20p13-p12 and the proteins they encode, useful for the prevention, diagnosis and treatment of asthma, obesity and inflammatory house diagnosis.
   prevented, diagnosed and/or treated by the above methods include, for example asthma, obesity and inflammatory bowel disease. The present sequence is that of a Gene 216 related primer used in examples of the invention. The primers are used in the physical mapping of the gene (ABZ72067-ABZ72088), polymorphism identification using single strand conformational polymorphism (SSCP) analysis (ABZ7091-ABZ72184), sequencing (ABZ72185-ABZ72268) and genotyping (ABZ72317-ABZ72362)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; Gene 216; chromosome 20p13-p12; antiasthmatic; anorectic; antiinflammatory; gastrointestinal; gene therapy; vaccine; asthm

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
The invention relates to antisense compounds targetted to nucleic acid encoding RECQL2 (gene associated with Bloom's disorder) to inhibit the expression of RECQL2. Antisense compounds of the invention are useful f treating diseases associated with expression of RECQL2, in humans. They are useful for diagnostics, therapeutics and as research reagent, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 20 BP; 4 A; 7 C; 3 G; 6 T; 0 U; 0 Other;
                                                                                                                                Antisense compounds targeted to nucleic acids encoding RECQL2 associated with Bloom's disorder, for modulating RECQL2 expression and treating diseases e.g. tumors associated with expression of the RECQL2 in humans.
                                                                                                                                                                                                  WPI; 2002-535979/57
                                                                                                                                                                                                                                                                                                                                01-MAR-2001; 2001US-00798096
                                                                                                                                                                                                                                                                                                                                                                 04-JUN-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                               modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           modified_base

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 20
The present invention relates to antisense oligonucleotides and methods for modulating the expression of human or mouse Protein Phosphatase 2 catalytic subunit alpha. The antisense oligonucleotides are useful for inhibiting the expression of Protein Phosphatase 2 catalytic subunit alpha and for treating diseases or conditions associated with aberrant expression of Protein Phosphatase 2 catalytic subunit alpha. Such diseases include diabetes and cancer. The antisense oligonucleotides are also useful for diagnostics, therapeutics, and prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation. They are also useful as research reagents for distinguishing between functions of various members of a biological pathway. ABS5400-ABS65477 represent human or mouse Protein Phosphatase 2 catalytic subunit alpha antisense oligonucleotides which comprise a phosphorothioate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Phosphatase 2 catalytic subun associated with the aberrant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense oligonucleotides targeted to nucleic acid encoding Protein Phosphatase 2 catalytic subunit alpha, useful in treating diseases associated with the aberrant expression of Protein Phosphatase 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-FEB-2001; 2001US-00780049
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    modified_base
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              phosphorothioate;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  15-NOV-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                 The present invention relates to antisense oligonucleotides and methods for modulating the expression of human or mouse casein kinase 2-alpha prime. The antisense oligonucleotides are useful for inhibiting the expression of casein kinase 2-alpha prime, and for treating diseases or conditions associated with aberrant expression of casein kinase 2-alpha prime. Such diseases include diabetes mellitus, and hyperproliferative disorders (particularly cancers e.g. breast cancer, prostate cancer, or liver cancer). The antisense compounds are also useful for diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits, and in distinguishing between functions of various members of a biological pathway. ABS67840-ABS67917 represent human or mouse casein kinase 2-alpha prime antisense oligonucleotides which comprise a phosphorothicate

The antisense oligonucleotides are useful for inhibiting the expression of casein kinase 2-alpha prime, and for treating diseases or conditions associated with aberrant expression of casein kinase 2-alpha prime. Such diseases include diabetes mellitus, and hyperproliferative disorders (particularly cancers e.g. breast cancer, prostate cancer, or liver cancer). The antisense compounds are also useful for diagnostics, therapeutics, prophylaxis, e.g. to prevent or delay infection, inflammation or tumour formation, as research reagents and kits, and in distinguishing between functions of various members of a biological pathway. ABS67840-ABS67917 represent human or mouse casein kinase 2-alpha prime antisense oligonucleotides which comprise a phosphorothioate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; casein kinase 2-alpha prime; diabetes mellitus; hyperproliferative disorder; breast cancer; prostate cancer; liver cancer; inflammation; tumour formation; cytostatic; antidiabetic; antiinflammatory; antimicrobial; phosphorothioate;
